

GLS-150

SERIES

COMPACT CNC TURNING CENTERS

THE ULTIMATE MACHINING POWER
WOODWAY®

HIGH SPEED CNC TURNING CENTERS

Packed with industry leading technology and top quality components, the GOODWAY GLS-150 series turning centers combine speed, stability and compact machine size to bring you The Ultimate Machining Power®. These high speed machines will easily accomplish the demanding turning applications of today and tomorrow. Furthermore, with optional live tooling, C-axis, and Y-axis, milling, turning applications can be completed in one single machine.

- ▶ GLS-150 series designs for optimal performance of the latest machining needs, motor power and structure rigidity are highly increased.
- ▶ High precision linear guide way design is used in X & Z axes to provide the optimum control and efficient movement. Rapids are up to 30 m/min.
- ▶ Fully enclosed splashguards keep chips and coolant contained for a safe clean working environment.
- ▶ The auto lubrication system delivers metered amounts of lubrication to the slide ways, ball screws, and vital components. Distribution is automatically shut-off during idling to prevent waste.

SERIES	GLS-150	GLS-200
Chuck Size	6"	8"
Bar Capacity	Ø 51 mm (2")	Ø 65 mm (2.55")
Max. Turning Length* ¹	500 mm (19.6")	480 mm (18.9")

*1 Individual models may vary, detail specification please see work range diagram.

MAXIMUM STRENGTH CONSTRUCTION

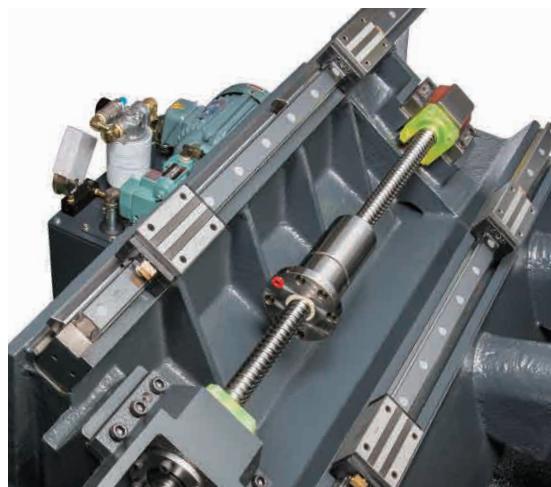

1
2

Built to withstand years and years of rigorous high production turning, the heavily ribbed, one-piece, thermally balanced bed and casting parts are of "MEEHANITE" casting. The 30° true slant bed design further provides superior support for the headstock, turret, and tailstock, thus, creating the rigidity needed for long-term high precision turning and efficient chip removal.

(Casting structure of GLS-150 series shown.)

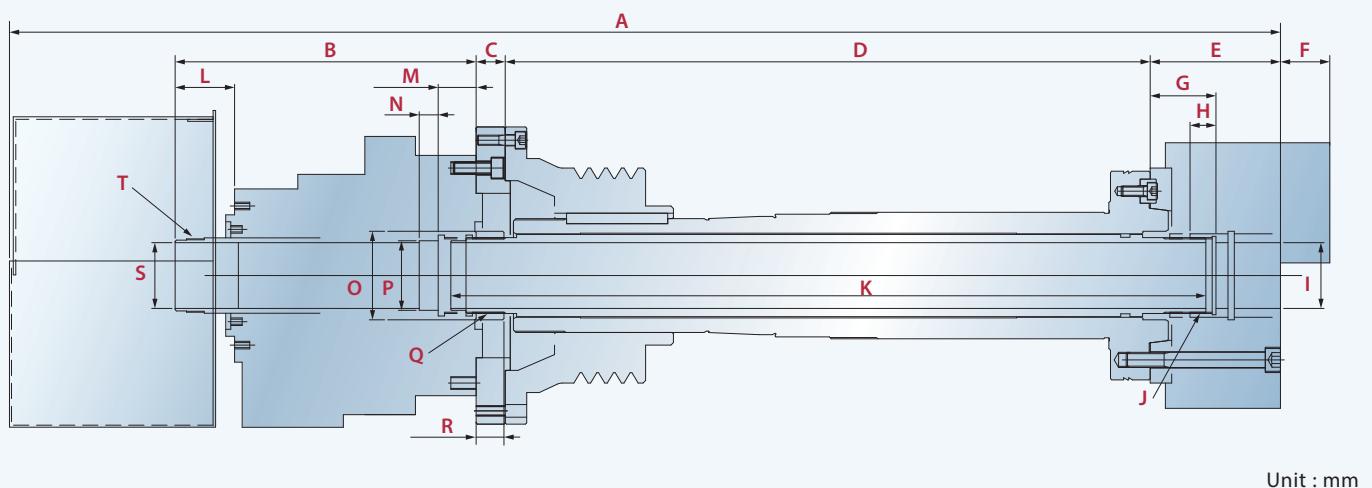

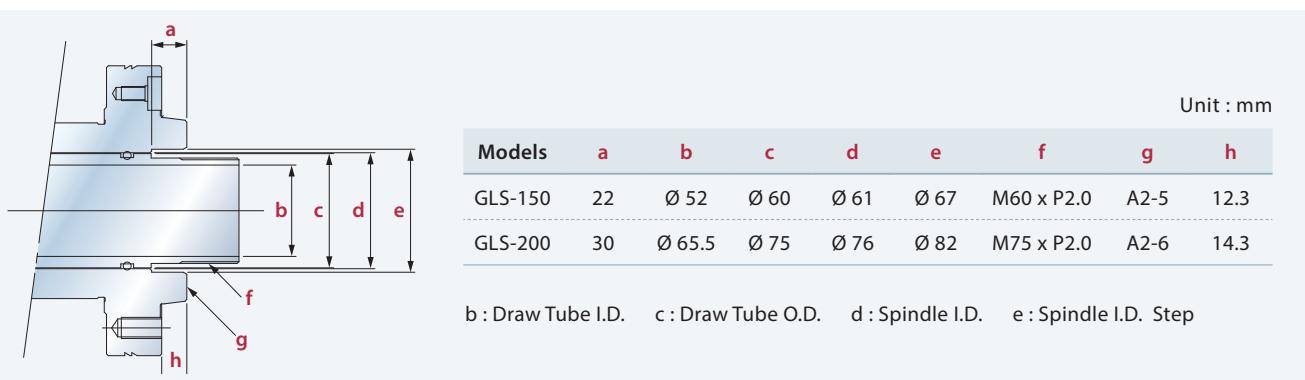

- ▶ Major structural components have been combined into one solid platform. The low center of gravity 30° slant bed design provides the most rigid foundation possible for the headstock, turret, and tailstock.
- ▶ By using Finite Element Methods (FEM), optimal reinforce ribbings are directly cast into the one-piece bed structure. Mechanical rigidity has been increased by more than 30% when compared to conventional designs. The GLS-150 series is capable of performing heavy-duty turning and maintaining long-term high-precision accuracy. More rigidity also means extended tool life.

ULTIMATE TURNING POWER

- ▶ The heavy-duty headstock is of one-piece casting reinforced with heat dispensing fins.
- ▶ Standard rigid tapping feature provides high-speed precision tapping without the use of floating tap holders. Set-up is easier and depth of thread more accurate, permitting maximum productivity for tapping operations.
- ▶ The precision direct belt drive system provides greater spindle control, flexibility and serviceability. Pulley ratios fine tune the motor's maximum RPM to match the spindle's maximum RPM, which result in full output at the lowest RPM possible. Thus, utilizing the full potential of the spindle motor for maximum cutting power.

Spindle & Nose Dimension Drawing

- ▶ P4 grade (Class 7) super-high precision bearings are directly assembled for maximum level of support and precision. Bearing configuration is designed for heavy-duty cutting with ultra-smooth performance and long term durability with a higher level of accuracy.

Decelerate (sec.)	1.0	1.2	1.6	2.0	2.5	3.1	4.1	4.8

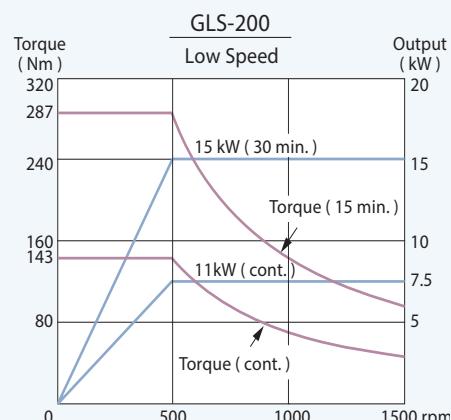

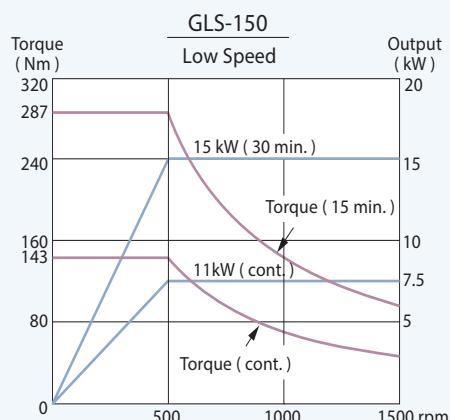

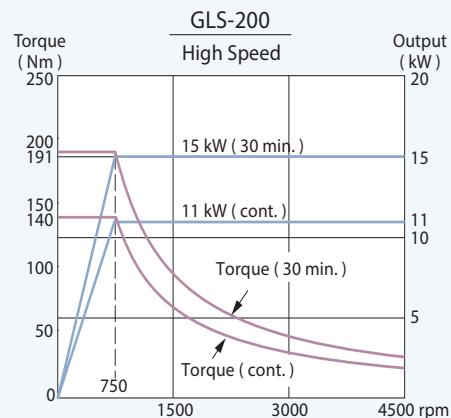

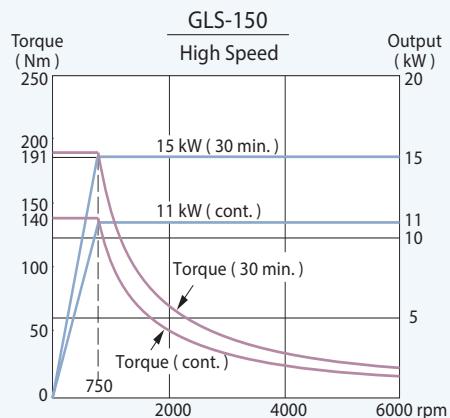

- ▶ GLS-150 models are available with high-speed, high-precision built-in spindle motors, which provides faster spindle response, reduces vibration and power loss, which translate to faster cycle times.

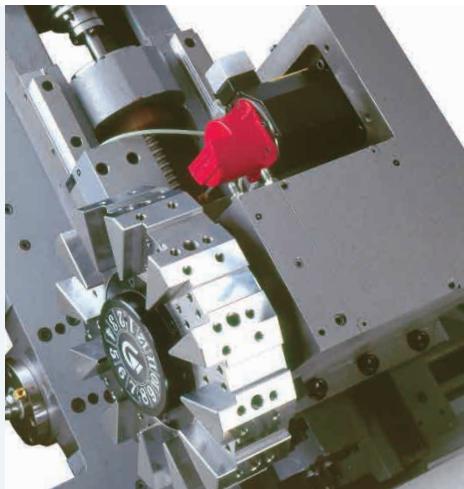

(Built-in spindle construction)

Spindle Output

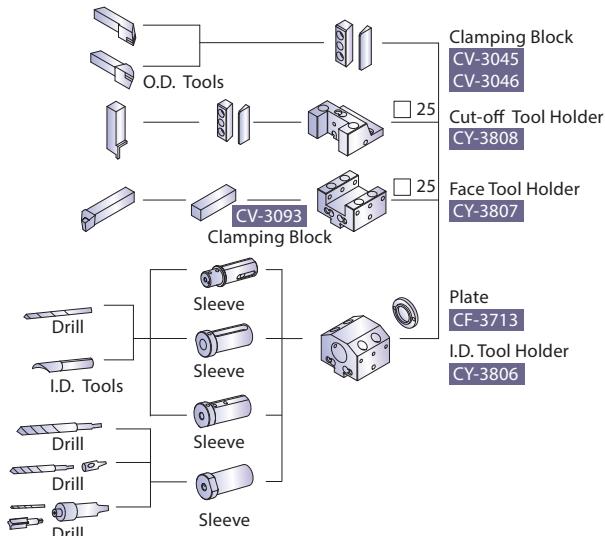

ADVANCED TURRET TECHNOLOGY

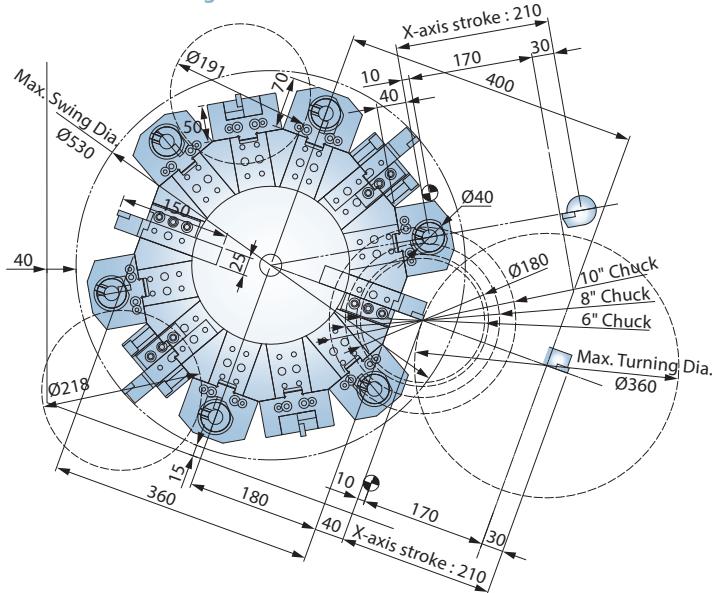

- ▶ A high-speed servo motor indexing system provides the 10 or 12-station turret with a 0.2 sec. indexing time.
- ▶ High precision curvic couplings and hydraulic clamping are used to enhance tool indexing accuracy and turret disk rigidity.
- ▶ The standard 12-station turret clears 180 mm (7.08") diameter work holding devices without interference while the opt. 10-station turret clears 224 mm (8.8") diameter.

Standard 12-Stations Turret

Tooling System

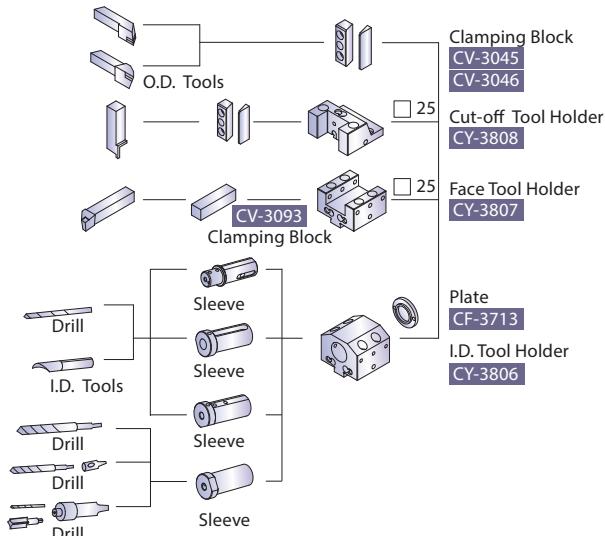

Interference Diagram

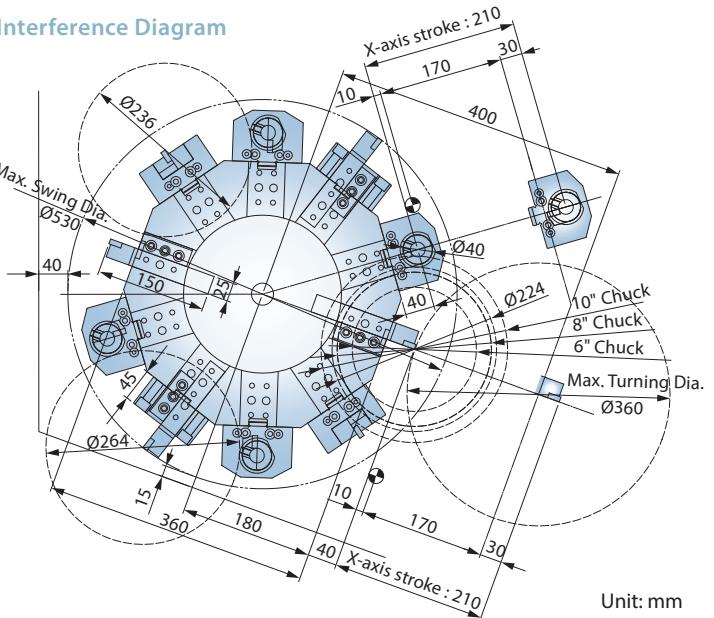

Optional 10-Stations Turret

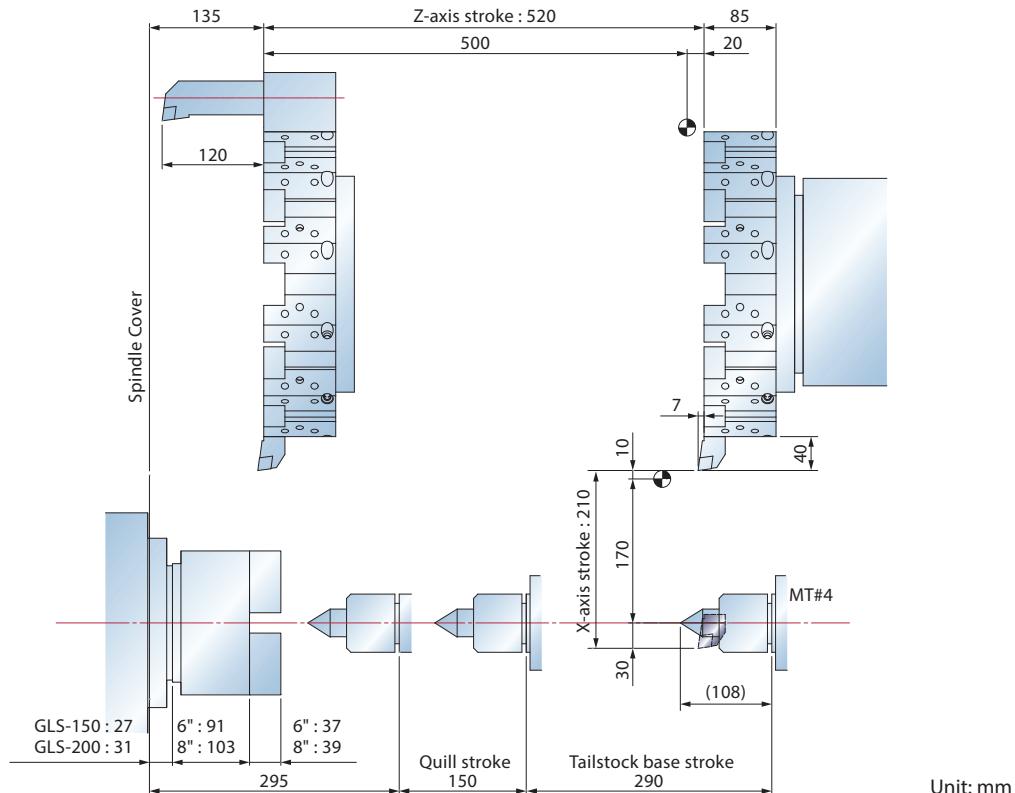

Tooling System

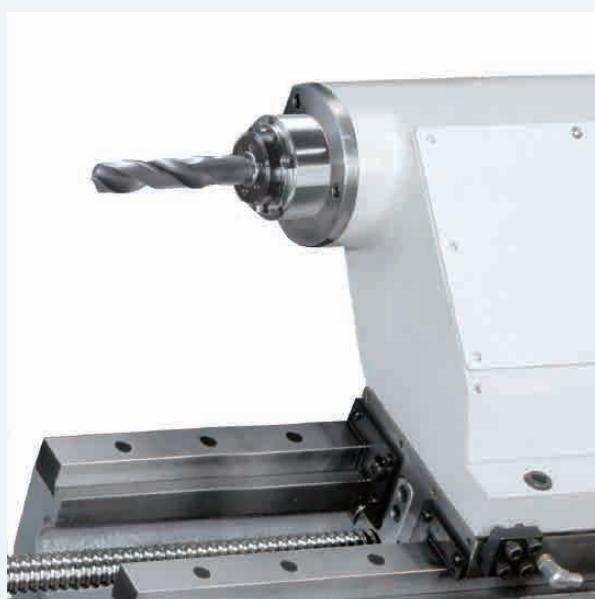

Interference Diagram

Work Range

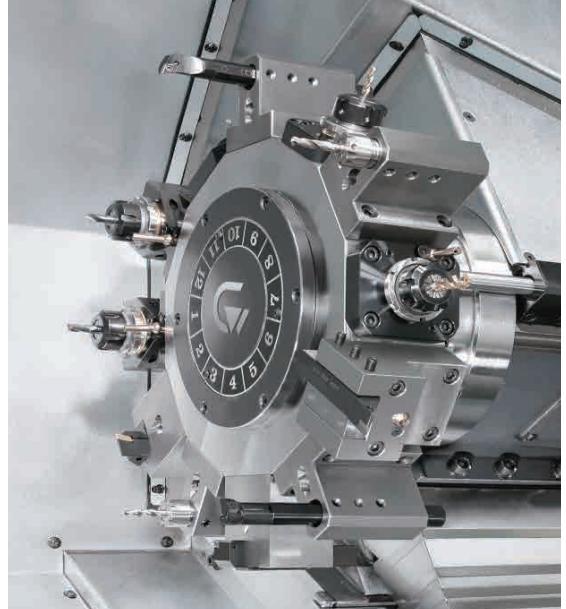

- ▶ The standard hydraulic tailstock uses live centers to provide support for long work-pieces. Quill pressure is adjustable and movement is programmable.
(Standard manual tailstock)

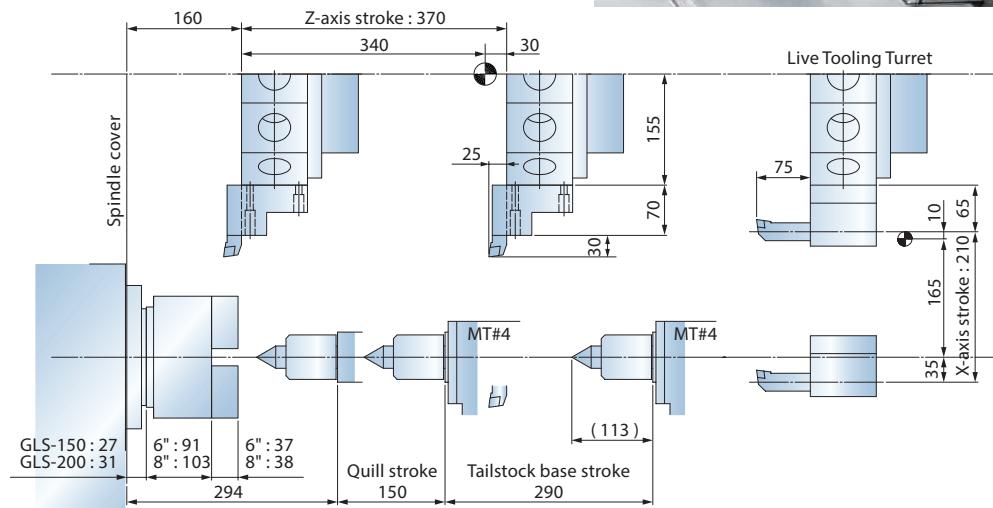

- ▶ The optional servo driven tailstock uses a servo motor and ball screw to position the tailstock and generate pressure to support the work-piece. Pressure against a work-piece is adjustable by increasing or decreasing the load of the servo motor, which can be programmed to provide variable and precise pressure during the machining process. This type of tailstock can also be used to drill the work-piece during the O.D. turning process.

LIVE TOOLING TURRET

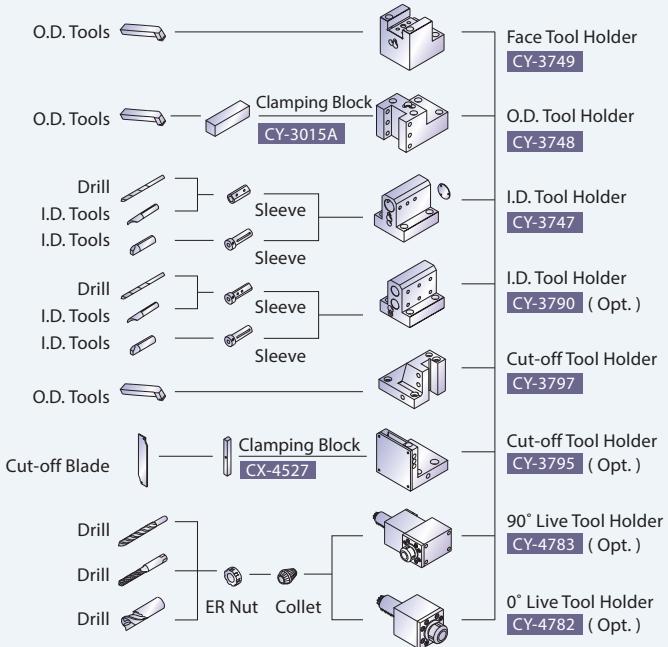

- ▶ The 12-station GOODWAY live tooling turret offers 12 stations available for live tooling (live tooling tools rotate in working position only) and features a non-lifting turret disk.
 - ▶ GOODWAY live tooling turret utilizes advanced servo indexing technology to achieve 0.2 second indexing time for adjacent stations and 0.5 second for stations at the opposite end of the disk.
 - ▶ With the latest technology, live tooling is driven by an AC servo motor to provide ample power, in the form of torque. Now, even the toughest of jobs may be tackled without a sweat.

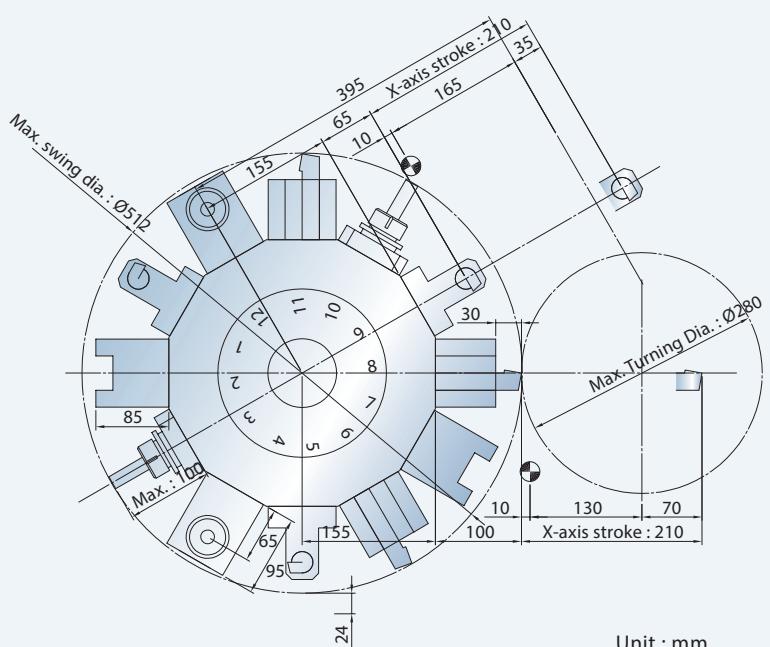

Work Range

Tooling System

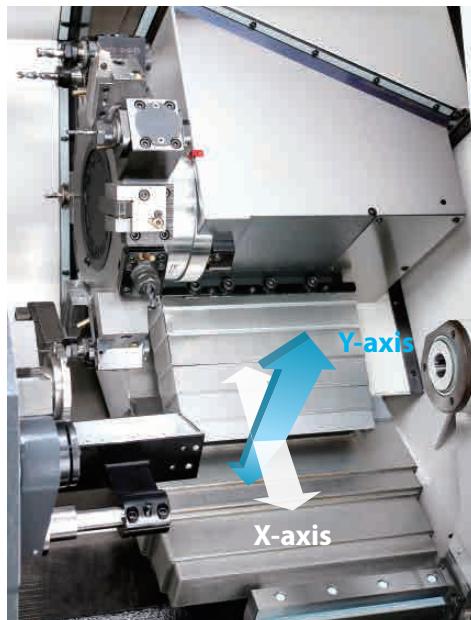

Interference Diagram

Y-AXIS MACHINING CAPABILITY

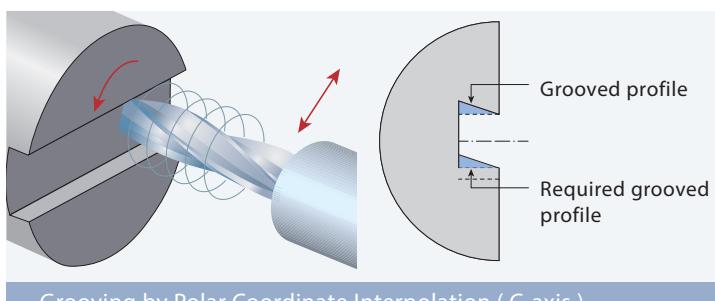

7
8

- ▶ Y-axis models perform virtually the same way as machining centers equipped with 4th-axis rotary tables, but with the benefit of built-in turning capability. The C-axis acts as the 4th-axis. This configuration replaces a turning center and machining center equipped with 4th-axis with one machine, thus, saving money, time, floor space, manpower and fixture costs, while reducing accuracy lost by eliminating the part from being moved to another machine.
- ▶ Y-axis control further enhances multi-tasking live tooling capabilities and improves various machining precision. High precision grooving and X-axis off-center drilling are enabled.
- ▶ With an abundant amount of Y-axis travel, 70 mm = ±35 mm (2.75" = ±1.37"), a wide variety of parts may be efficiently machined.

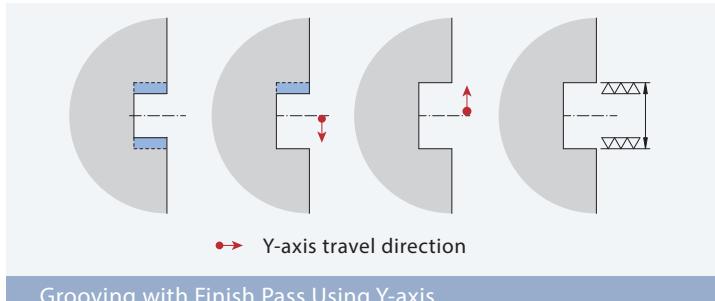

(GLS-150Y model shown with optional accessories.)

- ▶ On Y-axis equipped machines, the turret is mounted on a secondary 30 degrees wedge saddle on top of the X-axis slide. Guide ways are widely spaced for maximum strength.

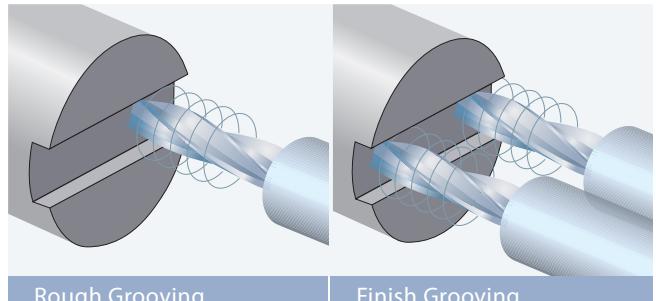

Grooving by Polar Coordinate Interpolation (C-axis)

- ▶ Grooving with Y-axis control produces grooves with higher accuracy.

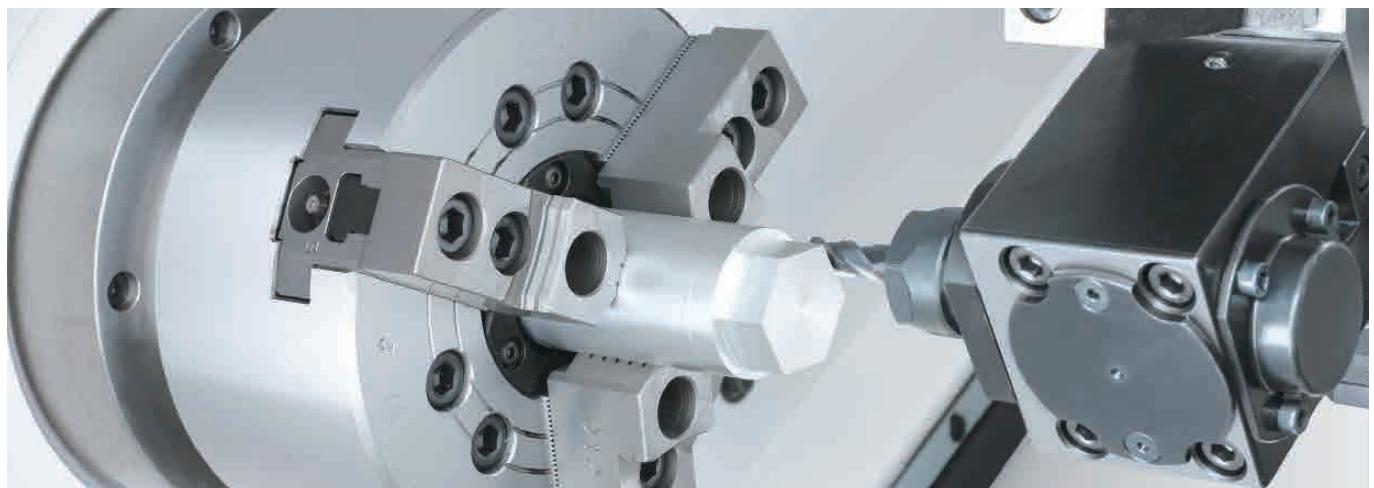

Grooving with Finish Pass Using Y-axis

Rough Grooving

Finish Grooving

MACHINING PERFORMANCE

FEATURES

Chip Conveyor

- ▶ The standard chip conveyor features adjustable timers that allow the operator to set operation intervals according to the amount of chips generated by the machine. Thus, reducing coolant loss to a minimum.

Built-in lub. oil collection system

Tri-color status light

3-Jaw chuck w/ Soft Jaws x 1 set

Coolant Pump

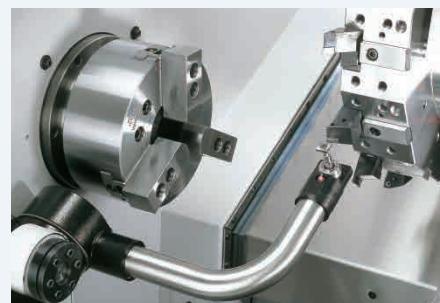

Coolant Tank

- ▶ Coolant system features a roll-out coolant tank for easy maintenance and high-pressure coolant pump for increased cooling power.

Tool Setter (Opt.)

- ▶ The optional RENISHAW HPMA tool presetter utilizes a motorized arm to lower the tool probe into position. An auto tool check function further increases tool touch-off efficiency.

Load Monitoring (Opt.)

- ▶ The optional load monitoring function is used to detect abnormal load of tools by monitoring the variation in spindle motor and servo motor loads during the cutting process. When abnormal loads are detected, the machine will stop at program end (M30) or immediately (feed hold status) according to tool life value or tool break value respectively.

OPTIONAL AUTOMATION FEATURES

Gantry Loading Systems

- ▶ Available standardized or custom gantry loading / unloading systems provide automatic operation for chucking operations. These flexible systems can be intergraded onto one or more machines to suit a wide range of applications.

Single Machine /
Gantry Type Robotic Arm and Stocker

(Gantry Loading with GOODWAY GA-2000/300 series)

Multiple Machines /
Gantry Type Robotic Arm and Stocker

(Gantry Loading with GOODWAY GS-200 series)

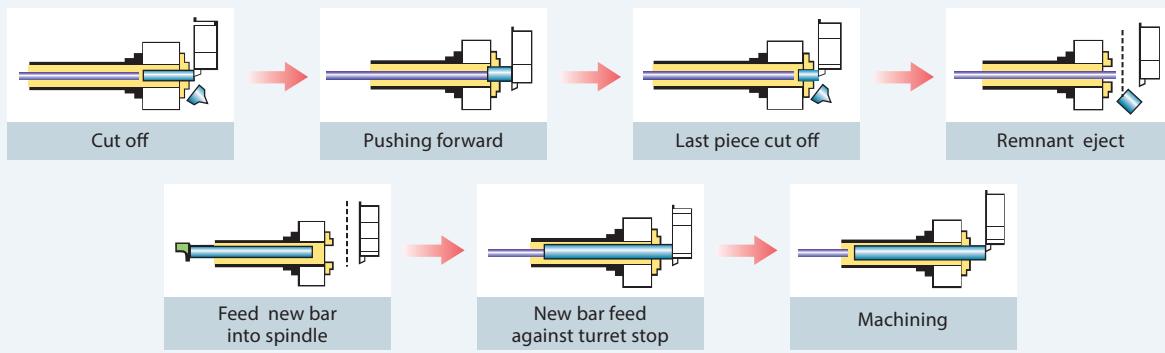

Bar Feeder

Models	BF-65C	BF-80C
Bar diameters	Ø 5 ~ 65 mm	Ø 6 ~ 80 mm
Maximum bar lengths ^{*1}	1,220 mm	1,525 mm
Magazine capacity	65 mm x 10 bars	80 mm x 7 bars
Control / drive type	SIEMENS / Pneumatic	MITSUBISHI / Servo
Foot print	1,600 x 1,118 mm	2,210 x 1,448 mm
Weight	250 kg	500 kg

*1 Actual bar length limited by total spindle + work-piece length (work-piece + chuck + spindle + cylinder + rear spindle cover lengths). A bar supporting device must be used if bar extends past the rear spindle cover, otherwise, the bar may bend during machining causing serious machine damage and injury or death to operator.

► Bar Feeding & Bar Change Cycle

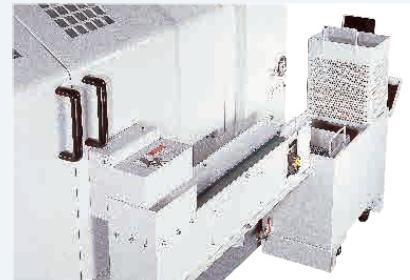

Parts Catchers

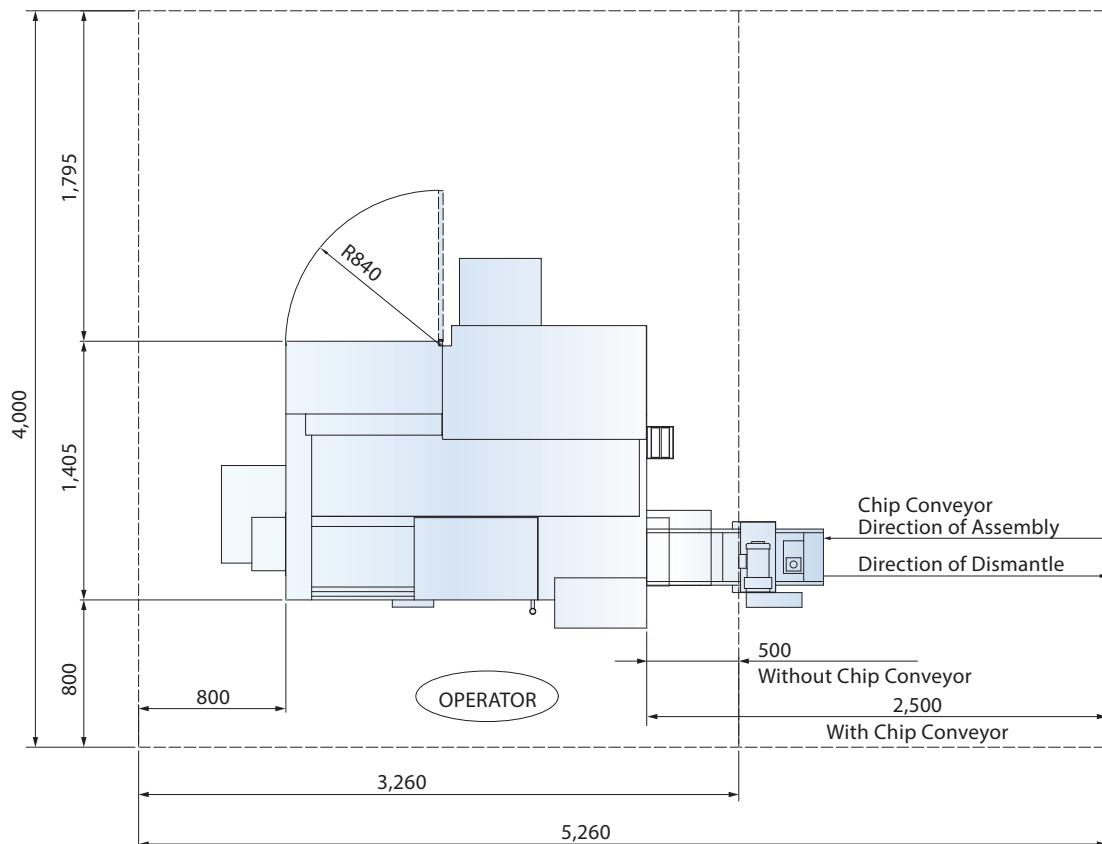

- Optional hydraulic parts catchers can be programmed to catch finished parts after cut-off. Parts conveyor systems are also available.
